

Vehicle Safety

Here are 5 important tips for car safety.

TECHNOLOGY

Make sure you have a good understanding of any systems and exactly what support they are designed to provide. But do not rely on them to right your wrongs.

ANTI-LOCK BRAKING SYSTEM

The single most important piece of technology in your car. ABS allows the driver to stand on the brakes as hard as you can without locking the wheels, while being able to control and steer the car.

TYRES

Having the correct tyres for your car and a good tyre tread is super important. The deeper the tread on your tyres the safer you are.

DRIVER SEAT POSITION

Being comfortable and well positioned in the driver's seat ensures proper control of your vehicle.

WOF

The warrant of fitness is a health and safety check for your vehicle to ensure it's brakes, suspension, tyres and other critical items are in safe condition. Make sure your WOF is up to date
